

Help Us in the Fight Against Breast Cancer

Are you a female between the ages of 20 and 80?

Female volunteers between the ages of 20 and 80 are needed for participation in a clinical research study to evaluate SoftScan, an investigational device.

The SoftScan uses optical (light) imaging techniques to evaluate the tissue of the breast and may deliver advantages of being more accurate, safer, and less invasive than current breast imaging techniques.

Your participation in this research study will help the development of a breast imaging system that may contribute to the detection, diagnosis, and treatment monitoring of breast cancer in the future.
