Jump and Plyometric Training Progression

**Goals**
1. Safely condition the knee and lower limb for the demands of jumping and landing during sports activity
2. Provide a logical sequence of progressive drills for pre-sports conditioning
3. Provide objective criteria for safe progression from training to sports participation

**Phases of Training**
- Double-leg training
- Double-leg complex training
- Single-leg training

**Recommended Frequency** 2 times per week

**Sequencing**
Begin each training session with a warm-up routine. Perform the jumping drills listed in the appropriate phase of your rehab. Be sure to limit your total contacts (or jumps) to the suggested amount listed for each training session to prevent injury. Progress within the phase as you master each exercise, performing each jump with proper technique and without pain.

**Warm-up and Stretch**
Generally, you should cycle, jog or use an elliptical trainer, rower or other device for 15 to 20 minutes so that you break a sweat before starting the program. After completing the jumping drills, cool down by stretching for 15 to 20 minutes.

**Criteria to Progress**
Do not progress to the next step in the phase until the present step is pain free, and you can perform with proper technique and without difficulty (muscle soreness or fatigue).

**Technical Essentials**
Each hop or jump should be performed with concentration on good technique. Perform each jump with a ‘stick’ landing, i.e. you should land and hold your balance momentarily before proceeding to the next jump. Keep the feet apart and do not let the knees rotate inward when taking off or landing. Soften the impact by landing on the balls of the feet and land with some bend in the knees and hips.

**Precautions**
Do not begin jump/plyometric training without clearance from your doctor and physical therapist. Jump training places heavy loads on the kneecap, patellar tendon and knee joint surfaces. Pain at these areas during jumping exercises should be reported to your physical therapist.
Jump and Plyometric Training Progression

**Phase 1**

- Double Limb (DL) hops on mini-trampoline
- DL hops on soft surface (carpeted floor, gym floor)
- DL Jump rope

Suggested Final Workout:
- DL hops on mini-trampoline x 30 repetitions
- DL hops on soft surface x 10 reps
- DL hops with jump rope x 20 reps

**Phase 2**

- DL forward hop, 6-12” distance
- DL side-to-side hops, 6-12” distance
- DL broad jumps, 12-18” distance
- DL broad jump-to-vertical jump
- Jump rope, alternating single limb (SL) hops

Suggested Final Workout:
- Warm-up with DL jumps on mini-tramp or jump rope x 30 reps
- DL forward hop x 5 reps
- DL side-to-side hops x 5 reps each side
- DL broad jumps x 5 reps
- DL broad jump-to-vertical x 5 reps
- Jump rope, alternate SL hops x 30 reps

**Phase 3**

- 90° DL Jump
- 180° DL Jump
- DL broad jump-to-vertical with 90°-180° turn
- Single limb (SL) hops in place on mini-trampoline
- Jump rope, double/triple SL hops, alternating feet
- SL forward hop, 6-12” distance
- SL side-to-side hops, 6-12” distance

Suggested Final Workout:
- Warm-up with mini-tramp or jump rope with DL → SL hops x 30-60 reps
- DL forward hops (x 5 reps) and side-to-side hops (x 5 reps each direction)
- 90° to 180° DL Jumps x 5 reps each
- DL broad jump-to-vertical with 90° to 180° turn x 5 reps each
- SL forward hops (x 5 reps) and side-to-side hops (x 5 reps each direction)

During this phase, drills can be advanced with exercises jumping over cones/hurdles and use of an agility ladder.
