

# CAROTID ARTERY STENOSIS

## 30-Day Post CEA and CAS Stroke and Death Rates

Massachusetts General Hospital performs procedures such as Carotid Endarterectomy (CEA) and Carotid Stenting (CAS) for patients with stroke or at risk for stroke due to blockage of a carotid artery.

Rates of 30-day death and complications for CEA and CAS patients at MGH are under 1% which is well below the maximum national benchmark of 6%.

**< 1%**  
Post procedural complications
