

MGfC Parenting Series: Respiratory Syncytial Virus (RSV) in Children

Respiratory syncytial virus (RSV) is a common illness that affects the airways. In older children and teens, RSV is often mild with cold-like symptoms. In babies and children under age 5, RSV can be very serious. Join our panel of experts from Mass General for Children to learn more about RSV, including symptoms, treatment, and prevention tips.

This online program is free and open to Mass General patients, families, staff, and the general public.

To attend this program, click on this link:
