

THE MAXWELL & ELEANOR BLUM PATIENT AND FAMILY LEARNING CENTER

# Sex Differences in Heart Disease and Unique Risk Factors in Women

Although historically considered a “man’s disease,” heart disease is the leading cause of death in men and women alike. In this talk, Dr. Michael Honigberg will review the epidemiology of heart disease in women, differences in heart disease between women and men, unique sex-specific risk factors for heart disease in women, and special considerations for promoting female heart health.

**This online program is free and open to MGH staff, patients, and the general public.**
