

THE MAXWELL & ELEANOR BLUM PATIENT AND FAMILY LEARNING CENTER

Gout: The Most Common Inflammatory Arthritis

Gout is an especially painful cause of arthritis that can involve most of the joints in the body. Caused by buildup of urate crystals in and around joints, gout is frequently associated with other common medical conditions such as diabetes and chronic kidney disease. While the pain can be debilitating, gout is highly treatable with medications and lifestyle changes. Join Dr. Guy Katz for a discussion on what can be done to treat and prevent this painful arthritis.

This online program is free and open to MGH staff, patients, and the general public.
