

# Ciaranello *et al.*, AIDS 2015: P1060-based Results: Present at 12 months, South Africa

Sample Patient's CD4 over Time

**\*\* The graph above serves as an example of what one patient in a microsimulation of the Cost-Effectiveness of Preventing AIDS Complication model might experience. Each run of the model usually includes 1-10 million patients in order to gain stable results, and therefore every patient's trajectory throughout the model will have slightly different paths and outcomes.**
