# Resilience Approach

Disruptor	Threat	Goal	
<b>Sea Level Rise</b> <b>Storm Surge</b> <b>Precipitation</b>	 <b>Flood</b> <ul style="list-style-type: none"> <li>1,000 year storm event with sea level rise, storm surge, and breaching of the Charles River Dam</li> </ul>	<ul style="list-style-type: none"> <li>Continue patient care services, including pharmacy operations, in the event of a flood</li> <li>Prohibit water infiltration into the building</li> </ul>	 <p><b>96 Hour Island Mode</b></p>  <p><b>MGH Community Support</b></p>
<b>Temperature</b>	 <b>Increased Temperatures</b> <ul style="list-style-type: none"> <li>Climate change-driven average temperature increases of 4-5°F by 2070 with an increase in days over 90°F</li> </ul>	<ul style="list-style-type: none"> <li>Maintain patient and staff comfort under changing climate conditions</li> </ul>	
<b>Wind</b>	 <b>Hurricane Winds</b> <ul style="list-style-type: none"> <li>Climate change-driven increase in risk of hurricanes along north-east coast. Category III is the predicted hurricane land-fall strength</li> </ul>	<ul style="list-style-type: none"> <li>Avoid facade damage that impairs patient care or creates a public hazard under predicted hurricane events</li> </ul>	
<b>Seismic</b>	 <b>Earthquake</b> <ul style="list-style-type: none"> <li>No change to structural risk beyond code</li> <li>Risk of utility disruption based on surrounding site geology / soil conditions and piping infrastructure age</li> </ul>	<ul style="list-style-type: none"> <li>Allow for continued patient care operation after a design seismic event</li> </ul>	
<b>Blast / Terrorism</b>	 <b>Security</b> <ul style="list-style-type: none"> <li>Vehicle intrusion</li> <li>Blast</li> </ul>	<ul style="list-style-type: none"> <li>Minimize casualties due to design threats</li> </ul>	

# Climate Change Resilience

## Sea Level Rise + Flood Mitigation

- Electrical service entry on 2nd floor
- Flood resistant ground floor façade and deployable barriers at grade & below grade tunnel connections
- Bridges for secondary means of campus access

## Storm & Storm Water Design

- Storm-induced flood conditions considered in flood mitigation design
- Storm water capture, storage, and re-use on-site
- Pervious paving at street level and green roof areas for reduced run-off

## Temperature Rise

- Cooling plant designed around 2070 projected design conditions
- Cooling tower water storage for continuous operation of cooling systems
- Heat island mitigation strategies including high reflectance roofing materials, vegetated roofs, and increased tree canopy

## Connectivity

- EV charging infrastructure for 25% of parking spaces with capability to expand
- Expanded bike parking for the campus
- New Blue Bike station at main entrance

# Site Sustainability and Resilience

Storm water detention basins & infiltration

Storm water & condensate re-use in cooling towers

Blue bike station

Expanded bike parking

Green roof terraces

Rain garden planters and pervious paving

Flood resistant facade

# Building Sustainability and Resilience

Rooftop PV energy generation

PARKMAN

Mechanical

Low window area & triple pane glazing

Low energy lighting

100% electric cooking facilities

Emergency water storage

High efficiency cooling plant with low GWP chillers

No natural gas used on-site

25% EV charging & future expansion

4B SITE

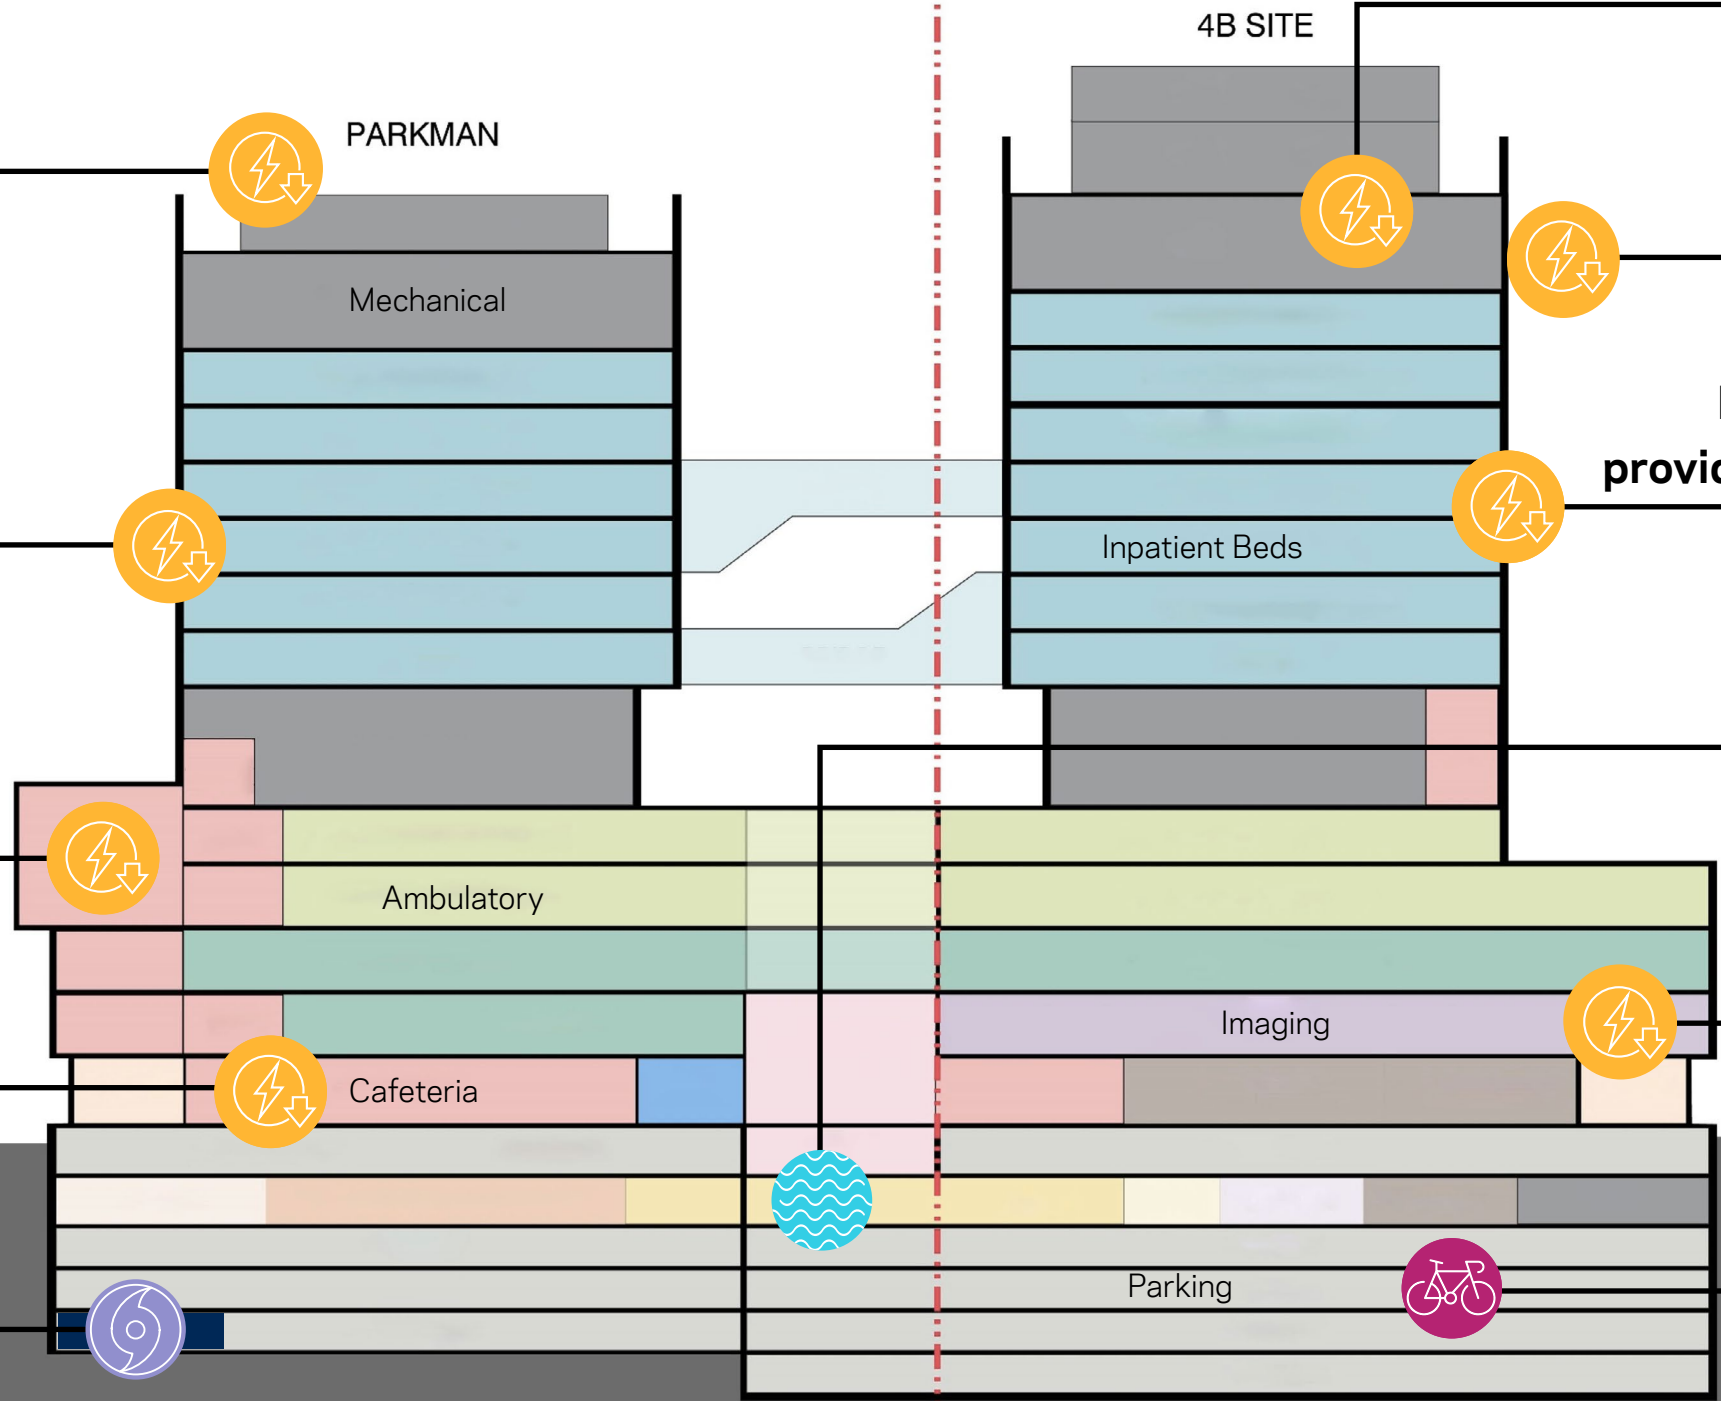

Inpatient Beds

Ambulatory

Cafeteria

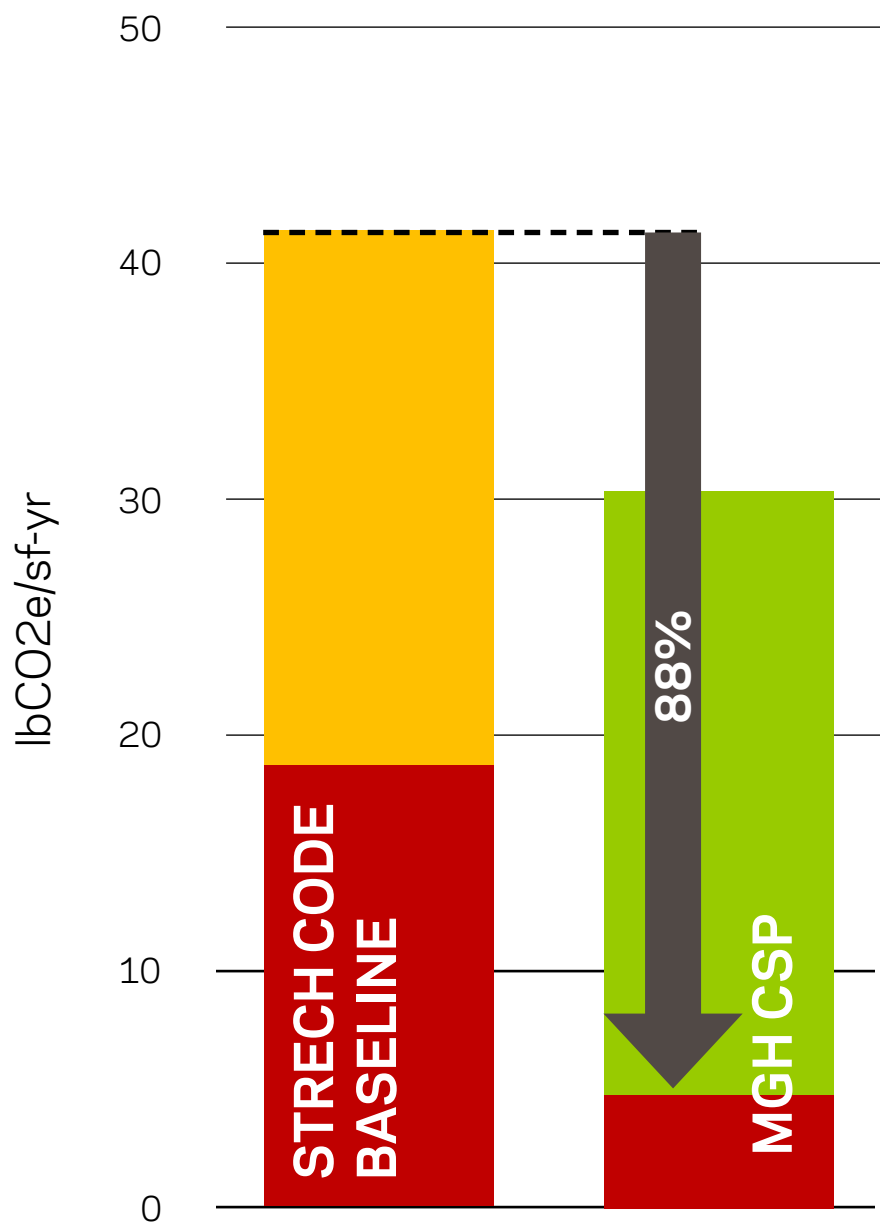

Imaging

Parking

# Energy and Carbon Performance

\*\* With 100% Renewable Electricity

## KEY

- Renewable Electric
- Electric
- Natural Gas
- District Steam

## Energy Performance

Site EUI - 163 kBTU/sf-yr

## Savings vs. MA Stretch Energy Code

- 25% site energy savings
- 88% CO<sub>2</sub>e savings

## Carbon Neutral Operations

Commitment to 100% renewable electricity and carbon offsets
