Is there a connection between autism and neuroinflammation in the brain?

The Massachusetts General Hospital at the **Lurie Center** is currently recruiting for a new research study that will use a MR-PET scanner to examine the brains of adults with **autism spectrum disorders**. The study will include several visits. Participants will be compensated for their time.

Participants must be:

- **Male**
- **Between the ages of 18 and 40 years old**
- **Diagnosed with an autism spectrum disorder**

For more information, please contact the Lurie Center research staff at:

(781) 860-1711
