Platelet Signatures in Multiple Sclerosis

Adult participants needed

The Neurological Clinical Research Institute is currently recruiting adult participants with multiple sclerosis or other white matter diseases of the brain and nervous system (NMO, CIS, RIS, sarcoidosis of the central nervous system)

This research study includes one visit to the Massachusetts General Hospital for a one-time blood draw and 3 optional follow up visits at 90 day intervals or at the onset of a clinical relapse.

This study aims to understand the role of platelets (blood cells) in MS with the eventual goal of developing a diagnostic blood test.

If interested please contact:
Andre Vogel, Clinical Research Coordinator
Telephone#: 617-726-4540 Email: avogel@partners.org

There are no anticipated serious psychological or physical risks to participation. There may not be any direct benefits, but participation is likely to help find the answer to the research question.

Principal Investigator:
Farrah J. Mateen, M.D., Ph.D.
Neurologist, Dept. of Neurology, MGH
Associate Professor, Harvard Medical School
